The surfaces in the decor series Max Metal are produced using various metal foils, unlike those of the other Max laminates (HPL) that consist of highly resistant melamine resin. The foils are real aluminium or copper - the surface is lacquered for protection. Real metal surfaces are unsuitable for horizontal applications with surface quality requirements such as high abrasion or scratch resistance.

There are differences in the machining of the individual types in this decor series. Please ensure that you are aware of them. Our application support team will be pleased to provide you with additional information. If you use decors of the Inlay group, please ensure that the fit is exact when working with joints. Pay attention to the right direction of Metal laminates when using them.

A real iron foil is included in the pressing of the laminate M082 for the adhesion of the magnets. Please remember this when machining this product. The high-gloss surface of this laminate is suitable for dry-wipe boardmarkers.

Please use a defined balancer mentioned in the table above. For decors M001, M002, M003, M004, M005, M082 the same laminate is the right choice as balancer.

\*\*\*) Please note that each laminate of decor M021 is handmade and the colour may differ from panel to panel.
